

## Our SHE goals and performance

### *Other emissions to air (particulate emissions, VOC, SO<sub>2</sub>, NO<sub>x</sub>)*

Reducing atmospheric emissions is material to the Roche Group and has been set as a priority topic. Roche's on-going efforts to reduce environmental impact, as part of its sustainable development program, are reflected in the 99% reduction in VOC emissions in metric tons per CHF 1 million of sales since 1992. In 2018, the Roche Group emitted 84.5 metric tons of VOCs, some 3% of which were halogenated and the rest non-halogenated. SO<sub>2</sub> and NO<sub>x</sub> emissions fluctuate around very low levels.

#### **Particulate emissions**

At Roche, particulate matter results from the burning of fossil fuels and industrial processes. Roche, worldwide, released 19.7 metric tons in 2018.

**Atmospheric emissions (metric tons)**
