Canada can do better. "The Guidelines encourage product choice based on potential advantages."

New ways to tackle inhibitors

Fewer clinic visits

Putting patients in the driving seat

Next generation haemostatic agents

Elevating the standard of care

Targeting sustained haemostatic protection to prevent bleeds at all times

Putting patients in the driving seat

A look to the future

With updates including a new definition of prophylaxis, the updated WFH Guidelines reflect important developments for the future treatment of people with haemophilia. Read on to find out how these changes can benefit you or your practice...
